

SWAAGAT Electrical and Power Services Selection Guide

Document Type: Service Discovery Guide

Category: Electrical and Power Services

Status: Published — Department Verified and Approved for Chatbot Use

Language: English

Purpose: Help users identify the correct electrical or electricity-related service available through SWAAGAT.

1. Purpose of This Guide

This guide helps the SWAAGAT AI Assistant identify which electrical or power-related service may be relevant to a user.

It is intended for users who describe a requirement without knowing the exact service name, for example:

- I need electricity for my new business.
- I need a temporary electricity connection.
- I installed a transformer and need approval.
- I want to install a DG set.
- I am constructing a building and need electrical clearance. □ I installed solar panels and want net metering.

This document should be used only for **service discovery and recommendation**.

The following information must come from the automatically generated service knowledge or live SWAAGAT data:

- Required documents
- CAF requirement
- Fees
- Processing time
- Questionnaire fields
- Approval flow
- Application status
- Payment status
- Certificate or approval availability

2. Departments Covered

Electrical Inspectorate

This guide includes services related to technical clearance and approval for electrical installations.

TSECL

This guide includes services related to electricity supply connections and net metering.

3. Services Covered

1. Electrical Line Clearance for Building Plan Approval — Service ID 7
 2. Approval for Energisation of DG Set — Service ID 15
 3. Approval for Energisation of Transformer — Service ID 22
 4. Apply for New Electricity Connection — Service ID 93
 5. Application for Temporary Power Connection — Service ID 95
 6. Application for Net Metering Application & Connection — Service ID 96
-

4. Services Excluded from Recommendation

The following service must not be recommended because it appears to be a demo or testing service:

- ❑ DEMOElectrical Line Clearance for Building Plan Approval — Service ID 109

The chatbot must never show a demo or test service to a normal user.

5. Main Service-Selection Rule

Before recommending a service, first identify what the user actually needs:

1. Clearance for a proposed building plan
2. Approval to energise a DG set
3. Approval to energise a transformer
4. A permanent new electricity connection
5. A temporary electricity connection
6. A net metering connection for a power-generation system such as rooftop solar

Do not recommend a service only because the user mentions electricity, power, wiring, transformer, generator or solar.

6. Quick Service-Selection Guide

A. User is preparing or submitting a building plan

Consider:

Electrical Line Clearance for Building Plan Approval — Service ID 7

Ask whether the user needs electrical clearance connected with building-plan approval.

Do not automatically recommend a new electricity connection because building-plan clearance and electricity supply connection are different requirements.

B. User has installed or proposes to energise a DG set

Consider:

Approval for Energisation of DG Set — Service ID 15

Ask whether the request concerns permission or approval to energise a diesel generator set.

Do not recommend this service merely because the user needs backup electricity. Confirm that a DG set is involved.

C. User has installed or proposes to energise a transformer

Consider:

Approval for Energisation of Transformer — Service ID 22

Ask whether a transformer has been installed or is proposed and whether approval for energisation is required.

Do not confuse transformer energisation approval with a normal electricity connection request.

D. User needs a permanent electricity connection

Consider:

Apply for New Electricity Connection — Service ID 93

Ask whether the user requires a new regular electricity supply connection for a property, establishment, business or unit.

Do not recommend this service when the requirement is temporary or specifically related to net metering.

E. User needs electricity only for a limited period

Consider:

Application for Temporary Power Connection — Service ID 95

Ask the purpose and expected duration of the temporary requirement.

Do not recommend a temporary connection when the user needs a regular permanent electricity connection.

F. User has installed or plans to install a power-generation system and wants grid adjustment or export

Consider:

Application for Net Metering Application & Connection — Service ID 96

Ask whether the user has or plans to install a grid-connected electricity-generation system, such as rooftop solar, and wants net metering.

Do not recommend net metering merely because the user mentions solar equipment. Confirm that connection with the electricity grid and net metering is required.

7. Initial Clarification Questions

When the user gives a broad request, ask one or more of the following:

1. Do you need a new electricity supply connection or approval for electrical equipment?
2. Is the electricity requirement permanent or temporary?
3. Does your request concern a building plan, DG set, transformer or solar/net-metering system?
4. Have you already installed the equipment, or are you planning to install it?
5. Are you seeking technical approval, energisation approval or an electricity connection?
6. Is this for a residential property, commercial establishment, industrial unit or construction activity?
7. Do you already have an electricity connection?
8. Are you applying for a normal connection or a net-metering connection?

The chatbot should ask only the minimum number of questions needed to distinguish the relevant services.

8. Individual Service Discovery Profiles

8.1 Electrical Line Clearance for Building Plan Approval

Service ID: 7

Department: Electrical Inspectorate

Common Names and User Terms

- Electrical line clearance
- Electrical clearance for building plan
- Building plan electrical approval
- Electricity line NOC for building
- Electrical Inspectorate building clearance
- Building plan ke liye electrical clearance
- Electric line approval for construction **Who Should Consider This Service?**

A person, business, developer or establishment seeking electrical line clearance connected with building-plan approval may consider this service.

Exact technical applicability and statutory conditions must be verified by the Electrical Inspectorate.

Consider This Service When

- The user is preparing or submitting a building plan.
- The user has been asked to obtain electrical line clearance.
- The construction or proposed building may be affected by an existing electrical line or electrical safety requirement.
- The user specifically asks for clearance from the Electrical Inspectorate for building-plan approval.

Do Not Recommend This Service When

- The user only needs a new electricity connection.
- The user needs temporary electricity during construction.
- The user wants approval to energise a transformer.
- The user wants approval to energise a DG set.
- The user is asking about rooftop solar or net metering.

Clarification Questions

1. Are you applying for building-plan approval?
2. Have you been asked to obtain electrical line clearance?
3. Do you need clearance for the proposed building location or an electricity connection?
4. Are you looking for construction approval or supply of electricity?

Related or Easily Confused Services

- Service ID 93 — Apply for New Electricity Connection
- Service ID 95 — Temporary Power Connection
- Service ID 22 — Approval for Energisation of Transformer

Common User Phrases

- I am constructing a building and need electricity clearance.
- Building plan approval ke liye electrical NOC chahiye.
- There is an electric line near my proposed building.
- Which service is required for electrical clearance of my building plan?
- I need approval from the Electrical Inspectorate for construction.

Recommendation Restriction

Do not recommend this service merely because the user mentions a new building. Confirm that the requirement concerns electrical line clearance for building-plan approval.

8.2 Approval for Energisation of DG Set

Service ID: 15

Department: Electrical Inspectorate

Common Names and User Terms

- DG set energisation approval
- Generator energisation approval
- Diesel generator approval
- DG commissioning approval
- Permission to start DG set
- Generator ko energise karne ki permission
- DG set electrical approval

Who Should Consider This Service?

A user seeking approval to energise or operate a DG set may consider this service.

The department must verify technical thresholds, capacity requirements and situations in which approval is mandatory.

Consider This Service When

- A DG set has been installed or is proposed.
- The user needs approval before energising the DG set.
- The user has been directed to obtain Electrical Inspectorate approval.
- The requirement specifically concerns a diesel generator installation.

Do Not Recommend This Service When

- The user only wants a new electricity connection.
- The user wants temporary power from the electricity supplier.
- The equipment involved is a transformer, not a DG set.
- The user asks about solar net metering.
- The user only wants to purchase a generator.

Clarification Questions

1. Is a DG set already installed or proposed?
2. Are you seeking permission to energise the DG set?
3. Is your requirement for backup generation or a normal electricity connection?
4. Have you been instructed to obtain Electrical Inspectorate approval?
5. What type and capacity of DG set is involved?

Note: The chatbot should not decide applicability based on capacity unless verified rules are available.

Related or Easily Confused Services

- Service ID 22 — Approval for Energisation of Transformer
- Service ID 93 — New Electricity Connection
- Service ID 95 — Temporary Power Connection

Common User Phrases

- I installed a generator. Which approval do I need?
- DG set start karne ke liye permission chahiye.
- How can I get approval for my diesel generator?
- I need DG set energisation approval.
- Which service is for generator commissioning?

Recommendation Restriction

Do not recommend this service simply because the user says they need backup power. Confirm that the requirement is specifically for approval to energise a DG set.

8.3 Approval for Energisation of Transformer

Service ID: 22

Department: Electrical Inspectorate

Common Names and User Terms

- Transformer energisation approval
- Transformer commissioning approval
- Permission to charge transformer
- Electrical Inspectorate transformer approval
- Transformer start karne ki permission
- Transformer electrical approval

Who Should Consider This Service?

A user seeking approval to energise or commission an installed or proposed transformer may consider this service.

Technical conditions and transformer-capacity requirements must be verified by the Electrical Inspectorate.

Consider This Service When

- A transformer has been installed or is proposed.
- Approval is required before energising or charging the transformer.
- The user specifically asks for Electrical Inspectorate approval for a transformer.
- The user's project includes a dedicated transformer installation.

Do Not Recommend This Service When

- The user only needs a standard electricity connection.
- The user is asking about a DG set.
- The user needs temporary construction power.
- The user is applying for rooftop solar net metering.
- The user only wants transformer repair or purchase information.

Clarification Questions

1. Has a transformer been installed or proposed?
2. Are you seeking approval to energise or commission it?
3. Do you need a new electricity connection as well?
4. Has the Electrical Inspectorate asked for an energisation application?
5. Is the request about a transformer or a DG set?

Related or Easily Confused Services

- Service ID 15 — Approval for Energisation of DG Set
- Service ID 93 — Apply for New Electricity Connection
- Service ID 95 — Temporary Power Connection

Common User Phrases

- I installed a transformer and need approval.
- Transformer energisation ke liye kaunsa service hai?
- I need permission to charge my transformer.
- Which service is used for transformer commissioning?
- Electrical Inspectorate approval for transformer is required.

Recommendation Restriction

Do not recommend this service merely because the user mentions high electricity load. Confirm that the user needs approval for transformer energisation.

8.4 Apply for New Electricity Connection

Service ID: 93

Department: TSECL

Common Names and User Terms

- New electricity connection
- New power connection
- New electric meter connection
- Permanent electricity connection
- TSECL new connection
- Bijli ka naya connection
- New commercial electricity connection
- New industrial power connection

Who Should Consider This Service?

A user who needs a new regular electricity supply connection for a property, establishment, business or unit may consider this service.

The electricity supplier must verify connection category, load, location and technical eligibility.

Consider This Service When

- No electricity connection currently exists for the premises.
- The user needs a regular or permanent supply connection.
- A new home, shop, office, establishment or industrial unit needs electricity.
- The user asks for a new meter or new electricity consumer connection.

Do Not Recommend This Service When

- The user requires electricity for only a short or fixed period.
- The user already has a connection and only wants net metering.
- The user needs technical approval for a transformer or DG set.
- The user seeks electrical clearance for building-plan approval.
- The user wants to modify an existing connection but no verified modification service is present in this guide.

Clarification Questions

1. Do you already have an electricity connection at the premises?
2. Do you need a permanent or temporary connection?
3. Is the connection for a home, business, industry or construction activity?
4. Are you applying for normal supply or net metering?
5. Do you also have a transformer, DG set or other installation requiring separate approval?

Related or Easily Confused Services

- Service ID 95 — Temporary Power Connection
- Service ID 96 — Net Metering Application & Connection
- Service ID 22 — Approval for Energisation of Transformer
- Service ID 7 — Electrical Line Clearance for Building Plan Approval

Common User Phrases

- I need a new electricity connection.
- New shop ke liye bijli connection chahiye.
- How can I apply for a new electric meter?
- I started a factory and need a power connection.
- Which service is used for a new TSECL connection?
- I have no electricity connection at this property.

Recommendation Restriction

Do not recommend a new permanent connection until confirming that the user does not need a temporary connection or net-metering service.

8.5 Application for Temporary Power Connection

Service ID: 95

Department: TSECL

Common Names and User Terms

- Temporary electricity connection □ Temporary power supply
- Construction electricity connection
- Short-term electricity connection
- Temporary electric meter
- Temporary bijli connection
- Event power connection
- Limited-period electricity supply

Who Should Consider This Service?

A user needing electricity for a limited or temporary period may consider this service. Exact eligible purposes, duration limits and connection conditions must be verified by TSECL.

Consider This Service When

- Electricity is required only for a limited period.
- The user needs power during construction or another temporary activity.
- The user specifically requests a temporary connection.
- A permanent connection is not currently required.

Do Not Recommend This Service When

- The user requires regular long-term electricity supply.
- The user wants a permanent new electricity connection.
- The request concerns DG-set or transformer energisation approval.
- The user wants net metering.
- The user is asking only about building-plan electrical clearance.

Clarification Questions

1. For what purpose do you need temporary electricity?
2. How long will the connection be required?
3. Is this for construction, an event or another temporary activity?
4. Do you eventually need a permanent connection?
5. Is any transformer, DG set or special electrical installation involved?

Related or Easily Confused Services

- Service ID 93 — Apply for New Electricity Connection
- Service ID 7 — Electrical Line Clearance for Building Plan Approval
- Service ID 15 — Approval for Energisation of DG Set

Common User Phrases

- I need electricity during construction.
- Temporary bijli connection kaise milega?
- I need power for a short period.
- Which service is for a temporary meter?
- I need electricity only for a few months.
- I need a temporary connection before the permanent connection.

Recommendation Restriction

Do not recommend temporary power only because construction is mentioned. Confirm that the user wants a limited-period electricity supply rather than building-plan clearance or a permanent connection.

8.6 Application for Net Metering Application & Connection

Service ID: 96

Department: TSECL

Common Names and User Terms

- Net metering application
- Solar net meter
- Rooftop solar connection
- Solar grid connection
- Bidirectional meter
- Solar electricity export
- Net meter lagwana hai
- Solar panel TSECL connection

Who Should Consider This Service?

A user who has installed or plans to install a grid-connected electricity-generation system and needs net metering may consider this service.

Exact technology, capacity, technical eligibility and regulatory conditions must be verified by TSECL.

Consider This Service When

- The user has or plans to install rooftop solar or another eligible generation system.
- The user wants to connect the system to the electricity grid.
- The user wants a net meter or bidirectional meter.
- The user wants electricity generated at the premises to be adjusted against grid consumption or exported according to applicable rules.
- The user specifically asks about TSECL net metering.

Do Not Recommend This Service When

- The user only needs a normal new electricity connection.
- The user needs temporary electricity.
- The user wants a standalone solar system without grid connection.
- The request concerns DG-set energisation.
- The request concerns transformer energisation.
- The user asks only about purchasing or installing solar panels.

Clarification Questions

1. Have you installed or planned a rooftop solar or other generation system?
2. Do you want to connect it to the electricity grid?
3. Do you already have an electricity connection?
4. Are you seeking a net meter or bidirectional meter?
5. Is the system grid-connected or standalone?
6. Are you asking about the connection process or your existing application status?

Related or Easily Confused Services

- Service ID 93 — Apply for New Electricity Connection
- Service ID 22 — Approval for Energisation of Transformer
- Service ID 15 — Approval for Energisation of DG Set

Common User Phrases

- I installed solar panels and need net metering.
- Solar net meter ke liye kaunsa service hai? □ I want to export solar power to the grid.
- How can I apply for a bidirectional meter?
- I already have an electricity connection and installed rooftop solar.
- Which TSECL service is for net metering?

Recommendation Restriction

Do not recommend net metering merely because the user mentions solar panels. Confirm that the user wants a grid-connected system and net-metering arrangement.

9. Important Distinctions

Building-Plan Clearance vs Electricity Connection

Electrical line clearance for a building plan concerns clearance connected with building approval.

A new electricity connection concerns supply of electricity to the premises.

The two may both be relevant to a project, but they are not the same service.

New Connection vs Temporary Connection

Recommend a new connection when the user needs normal ongoing electricity supply.

Recommend a temporary connection when the electricity requirement is only for a limited period.

Ask about duration when the user's requirement is unclear.

Electricity Connection vs Transformer Energisation

A new electricity connection is a supply-related service.

Transformer energisation is technical approval for a transformer installation.

A complex project may require both, but the chatbot must not assume that one automatically replaces the other.

DG Set vs Transformer

A DG set generates backup or independent electricity.

A transformer changes electrical voltage levels within a supply arrangement.

Ask which equipment the user has before recommending an energisation service.

New Connection vs Net Metering

A new connection is used when the user needs regular electricity supply.

Net metering is relevant when the user has or plans a grid-connected generation system and wants net-metering arrangements.

A user may need an existing electricity connection before net metering, but the chatbot must not state prerequisites unless verified by TSECL.

10. Example Chatbot Conversations

Example 1 — Broad Electricity Requirement

User: I need electricity for my new shop.

Assistant: Do you need a regular permanent electricity connection or electricity only for a temporary period?

User: Permanent connection.

Assistant: You may consider **Apply for New Electricity Connection — Service ID 93**. I can also show its required documents, application form, fees and processing information.

Example 2 — Construction Requirement

User: I am constructing a building. Which electrical service do I need?

Assistant: Do you need electrical line clearance for building-plan approval, or a temporary electricity connection for construction work?

Example 3 — DG Set

User: I installed a generator in my factory.

Assistant: Are you seeking approval to energise the DG set, or are you asking about a normal electricity connection?

User: Approval to start the DG set.

Assistant: You may consider **Approval for Energisation of DG Set — Service ID 15**.

Example 4 — Transformer

User: We installed a new transformer. Which application should we submit?

Assistant: Are you seeking approval from the Electrical Inspectorate to energise the transformer?

User: Yes.

Assistant: You may consider **Approval for Energisation of Transformer — Service ID 22**.

Example 5 — Temporary Power

User: We need electricity at a construction site for six months.

Assistant: You may consider **Application for Temporary Power Connection — Service ID 95**. The exact eligibility and duration conditions should be confirmed from the service information.

Example 6 — Solar Net Metering

User: I installed solar panels on my roof and want to send electricity to the grid.

Assistant: Do you already have an electricity connection and are you seeking a net or bidirectional meter?

User: Yes.

Assistant: You may consider **Application for Net Metering Application & Connection — Service ID 96**.

Example 7 — Multiple Possible Services

User: I am opening a factory and need power.

Assistant: Your project may involve more than one electrical service. Please clarify:

1. Do you need a new electricity supply connection?
2. Will a dedicated transformer or DG set be installed?
3. Do you need temporary construction power?
4. Are you also seeking electrical clearance for a building plan?

The assistant should recommend services only after receiving enough information.

11. AI Recommendation Rules

1. Recommend only services listed in this verified guide.
2. Never recommend demo service ID 109.
3. Do not select a service merely because one keyword matches.
4. Ask clarification when multiple services may apply.
5. Distinguish technical approval from electricity supply connection.
6. Distinguish permanent connection from temporary connection.
7. Distinguish DG-set energisation from transformer energisation.
8. Distinguish a normal connection from net metering.
9. Do not invent equipment-capacity thresholds.

10. Do not invent statutory applicability.
11. Do not invent documents, fees, forms or processing timelines.
12. Use generated service knowledge when the user asks for documents, fees, CAF, approval flow or processing time.
13. Use live application data when the user asks about their own application.
14. Present multiple possible services when a project may require separate approvals.
15. Clearly explain why each suggested service may apply.
16. When information is insufficient, ask one focused clarification question rather than guessing.
17. Never claim that a recommendation guarantees eligibility or approval.
18. Do not mention RAG, embeddings, Qdrant, database tables or internal service IDs unless the interface is designed to show the ID.
